Quality: High quality standards are assured through independent inspections carried out during the manufacture of the product. Wood is a natural product, and colour variations are part of its character and appeal.

Care instructions: We know you will want your outdoor furniture to retain its natural good looks and comfort for many years to come. This furniture is extremely tough and durable. However it will weather when exposed to the elements. When weathered it will turn a silvery grey colour. This will not affect the durability of the furniture. Your furniture has already been lightly oiled prior to packaging in the carton. To further enhance the finish and preserve the natural wood colour, it is recommended that a quality outdoor furniture oil be applied regularly. We recommend either *Altrend outdoor furniture oil* or *Cabots furniture & decking oil*, both of which are available in either Natural tone or Kwila tone. Do not use bleach or apply strong solvents as these can harm wood surfaces.

Nees Mitre 10 accepts no responsibility for any damage caused to any surface through the natural bleeding process of Kwila timber.
